Thakaa Camp: Cybersecurity Fundamentals for SME Owners and Entrepreneurs

About the Camp

To learn about local and global cybersecurity strategies and policies, as well as the organizational structure of cybersecurity.

Agenda

- Cybersecurity strategy
- Local and global cybersecurity policies and standards
- Cybersecurity penetration methodologies and protection methods
- A technical overview of some branches and tools of cybersecurity from a business perspective
- Organizational structure and job titles for cybersecurity
- Efficient and effective implementation methodologies for cybersecurity projects
- Essential documents that need to be developed and automated by cybersecurity professionals
- Practical cases and lessons learned from cybersecurity breaches for organizations
- Professional certifications for entrepreneurs and business owners
- Educational resources for further learning in the field after the camp

Collaborating Entities

Dalal Nasir Al-Harhi

A Ph.D. holder in Computer Science from the University of California, Irvine, currently serves as a faculty member at the University of Arizona. With practical experience spanning the cybersecurity sector in both business and academia, Dalal has collaborated with numerous organizations in Saudi Arabia and the United States. Formerly holding the position of a Cloud Security Engineer, she contributed to renowned American companies such as Farmers Insurance, Palo Alto Networks, and Dell. Her current role is Assistant Professor at the University of Arizona.

Objective of the Camp

This camp aims to shed light on local and global cybersecurity strategies and policies, as well as focusing on the technical aspect to provide attendees with a comprehensive understanding. It serves as a starting point to increase awareness among participants in the field of cybersecurity, highlighting professional certifications and educational resources available to them. The camp will also address the organizational structure of cybersecurity and the essential documents that need to be developed and automated. Furthermore, it will review practical cases and discuss the lessons learned from them.

Target Groups

Entrepreneurs and SME owners.
